PROFESSIONAL SUMMARY

Backend developer who built production REST APIs, real-time features and cloud infrastructure for a pet-care platform using NestJS, PostgreSQL, Redis, BullMQ and Socket.io, working through GitHub pull requests, code review and SonarQube quality gates. Also experienced in Python (Flask, Django) and integrating Google Gemini into applications.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, SQL
- **Backend:** NestJS, Node.js, REST APIs, Swagger (OpenAPI), TypeORM, Socket.io (real-time), BullMQ (job queues), Flask, Django
- **Databases & Storage:** PostgreSQL, Redis (caching), Cloudflare R2 (object storage), SQLite, MySQL, MongoDB
- **Testing & Quality:** Jest unit testing, SonarQube quality gates, API testing, debugging
- **Tools:** Git, GitHub (pull requests, code review, merge conflict resolution), VS Code
- **AI Integration:** Google Gemini API, prompt engineering
- **Frontend (working knowledge):** HTML5, CSS3, Bootstrap, React.js

EXPERIENCE

Python Full Stack Developer Intern — PawsSewaCare Private Limited (PetSewa), Remote | *Jul 2026 – Oct 2026*

- Built core REST APIs in NestJS for the platform's main domains and for social features (reels and communities), backed by PostgreSQL and TypeORM entities, and documented them with Swagger (OpenAPI).
- Implemented real-time communication with Socket.io and set up cloud infrastructure: Redis caching, BullMQ background job queues and a storage service on Cloudflare R2.
- Wrote Jest unit tests for service classes and fixed SonarQube coverage, duplication and code-smell findings on pull requests.
- Addressed reviewer feedback by resolving merge conflicts, aligning modules with the canonical database entities and removing redundant code.
- Delivered work through feature branches and GitHub pull requests in a remote team.

Python Development Intern — Codveda Technologies | *Aug 2025 – Sep 2025*

- Developed Python applications and REST APIs integrated with SQL databases.
- Debugged, tested and optimized application code; used Git/GitHub for version control.

PROJECTS

CareConnect AI – Smart Hospital Contact Manager — Python, Flask, SQLite, Google Gemini, JavaScript (GitHub)

- Built an AI-powered healthcare directory app with full CRUD, search and filtering, duplicate detection and a dashboard with contact statistics.
- Integrated Google Gemini to classify contacts by type and department with an explanation, and to draft professional administrative emails that users review before use.
- Documented prompt design and iteration in a prompt log; kept API keys and local data out of the repository and limited the app to non-patient, public directory data.

Contact Management REST Application — Flask, SQLite, JavaScript

- Built a Flask REST CRUD application for managing contact information with SQLite integration.
- Implemented field validation and duplicate prevention, with Git/GitHub version control.

Career Guidance Recommendation System — Python, Pandas, NumPy

- Built a recommendation system that matches users to careers based on their interests and skills.
- Processed and cleaned datasets with Pandas and NumPy and implemented the recommendation logic.

EDUCATION

B.E. Computer Science and Engineering — VV College of Engineering, 2024 | CGPA: 8.07 / 10

CERTIFICATIONS

- AWS Cloud Computing Fundamentals — Udemy
